◆ ABOUT

Senior Backend Engineer with 6+ years of experience building and operating scalable backend systems using Java and Spring Boot. Experienced in distributed systems, event-driven architecture, and cloud-native infrastructure. Hands-on with CI/CD, Kubernetes, Kafka, and messaging systems. Strong focus on production-ready systems and data-driven performance optimization.

◆ CORE SKILLS

– Backend	Java · Spring Boot · Spring Framework · Kotlin
– Architecture	Microservices · REST APIs · Event-Driven · Distributed Systems · OAuth 2.0 · JWT · CQRS · SAGA Pattern
– Data & Storage	MySQL · Redis · Elasticsearch · Cassandra · PL/SQL
– Messaging	Kafka · ActiveMQ
– DevOps & Cloud	Docker · Kubernetes · Jenkins · CI/CD
– Monitoring	Prometheus · Grafana · ELK Stack · Gatling
– Testing	JUnit · Spock · TDD · BDD · Jacoco
– Languages (Secondary)	Scala · JavaScript
– Tools	Git · Bitbucket · JIRA · Confluence

◆ WORK EXPERIENCE

Rakuten — Senior Application Engineer

Japan · Mar 2024 – Jan 2026

- Developed and maintained a **high-load e-commerce platform handling 1,380+ reservations/hour**, ensuring reliability and scalability under peak traffic.
- Modernized a legacy Kotlin repository by fully rewriting it in **Java 21 + Spring Boot**, improving user activity by 10% and user satisfaction by 60%.
- Led SQL performance optimization by analyzing query execution plans with **EXPLAIN**, indexing, and query refactoring — reducing response times **from 8s to under 3s** before release.
- Designed and executed end-to-end load & stress testing using **Gatling (Scala)**, simulating full reservation flows (5→23 users/sec), achieving **<3% error rate, <3s p95, 99.9% uptime**.
- Rebuilt and migrated CI/CD infrastructure by configuring Jenkins, integrating with Bitbucket and Harbor, and restructuring pipeline stages for **Docker-based deployments to Kubernetes**.
- Configured Kubernetes **liveness/readiness probes and rolling update strategies**, achieving zero-downtime deployments across services.
- Led migration from **RaaS to DBaaS**, resolving network and security constraints (ACL, SSL), ensuring secure connectivity and data integrity.
- Designed and operated an async messaging pipeline using **ActiveMQ**, processing 1,380+ reservation events/hour for email/SMS notifications — improving system decoupling and scalability.
- Implemented **Redis caching** for high-frequency reservation data, reducing database load under peak traffic conditions.
- Built centralized logging pipeline using **Filebeat, Logstash, Elasticsearch** for real-time monitoring and faster incident resolution.
- Improved test coverage to **95%+** using Jacoco with TDD/BDD practices (Spock, JUnit).

Vaillant Group — Full-Stack Java Developer

Turkey · Jun 2022 – Jun 2023

- Delivered an Android app (abandoned for 4 years); launched MVP in **2 months**, now used nationwide.
- Boosted SMS accuracy by **90%** and improved customer satisfaction by **+33%**.
- Rewrote legacy Servlet pages with **Spring Boot + Thymeleaf**, improving load time by over **70%**.
- Mentored new hires and handled backend + PL/SQL development in a Scrum team.

Sistek — Full-Stack Java Developer

Turkey · Jun 2020 – Jun 2022

- Developed features for dealer automation systems serving major automotive clients.
- Integrated with external APIs (**REST/SOAP**), secured endpoints with **OAuth**.
- Rewrote legacy **JSF** modules using Spring Boot and Hibernate.
- Designed scheduled billing jobs using Spring Scheduler and PL/SQL.

Godoro — Junior Java Developer

Turkey · Apr 2019 – May 2020

- Built backend features with **Java 8** and Spring MVC.
- Designed MySQL schemas and integrated frontend with JSF/Primefaces.

◆ EDUCATION

Dokuz Eylül University — AA, Computer Programming	Expected 2026
Anadolu University — AA, Justice	2018
Uludağ University — BA, Political Science and Public Administration	2015

◆ LANGUAGES

Turkish — Native	
English — Professional Working Proficiency	C1
Japanese — Conversational, actively studying	N5

◆ PERSONAL INTERESTS & SIDE PROJECTS

Music Production

Released **3 original tracks** on major streaming platforms (Spotify, Apple Music, YouTube Music). Compose, arrange, and produce — also handle cover art design in Photoshop.

Mobile Apps • iOS

Released **2 apps on the App Store: Tomorrows**, a minimal daily to-do app focused on what matters today; and **Gravity Hunter**, a one-touch arcade game built around a **hold → charge → release** mechanic — both designed, built, and shipped solo.

Reactive & Functional Programming

Actively exploring reactive paradigms with **Quarkus** (company-trained), **Spring WebFlux**, **Elixir**, and **Scala** — immutability, higher-order functions, and non-blocking event-driven streams.

AI & Automation

Experimenting with **LLMs, AI agents, and workflow automation** — prototyping internal tooling and personal productivity systems.
